Youth4Water Datathon

Citizen Science & Open Source data for Water SDG monitoring

Induce a point of change!

SUSTAINABLE DEVELOPMENT GOALS

Join the **Youth4Water Datathon** on
Citizen Science & Open Source data for water SDG monitoring

In 2015 the Sustainable Development Goals (SDGs) have been set, and governments all over the world have committed themselves to achieve these 17 goals. SDG6 and many other targets, relate to water issues.

"increased utilization of the latest Earth observations, citizen science and private sector data should be incorporated into data-monitoring systems at all levels to complement existing data-collection efforts."

What should we **monitor** to reach the water SDGs and **solve the problems in your** neighbourhood, town or community?

Young people are the future; **join, improve & share your ideas**!

- 24th of November 9 AM to 9 PM-
- Lijm & Cultuur, Delft -
- For everybody between 18 and 30 years old -
- Main language is English -

Look at www.ihp-hwrp.nl/index.php/youth4water-datathon/
for the contest specifications
& to register before the 8th of November

NETHERLANDS NATIONAL
IHP-HWRP COMMITTEE

Why join this Datathon?

1. Community
2. To learn & teach
3. To solve problems
4. To create something new
5. To meet like-minded people
6. To build, because building is fun and rewarding
7. To gain the respect of peers, through creative expression
8. To collaboratively push the limits of technology as we know it today
9. To meet experts in the fields of Citizen Science & Open Source Data

Is your idea the best? In 2019, we will enable you **to implement your monitoring methods**
